Subject: NOSB input

We support the effort to restrict corporations not complying with organic standards from labeling their products as USDA organic. While there will always be entities and bureaucrats testing the limits of certification standards, it is our duty to call them on it when they clearly step over the bounds of compliance.

At People's Grocery Co-op we do not purchase products from those companies who violate the intent of the certification process in order to market commodities and have commented to the NOSB that standards must be strictly adhered to, otherwise the credibility of our industry will be diminished.

Please forward information on how to add our names to the petition. Thanks.

Wayne Martin
